

Dr Hannele Korhonen is a research professor and a branch manager at Finnish Meteorological Institute (FMI). She is experienced leader and climate professional who works to build a compassionate and inclusive work culture achieving excellence and high impact. Her strengths lie in bringing clarity and direction to complex settings, getting people onboard, and getting things done.

She worked as a research scientist, deepening our understanding of the changing climate and its impacts on society and the environment. This background has equipped me with strong analytical and problem-solving skills, solid experience in complex project management and ability for constructive critical thinking.

Hannele's key competencies include strategic and tactical leadership, organizational and personnel development, team building, effective communication, climate science and policy, evidence-based decision making, and complex project management.
